Why Rewell Wen.

Dr. J. W. Ranney lectured before the Manhattan Athletic club on Wednesday night last on "The Brain and Nervous System." In his introduction, Dr. Ranney said that the citizens had had during the past week one of the most exciting cate of Republican institutions will be THAN ANY HOUSE IN KANSAS ourselves, he said, what it all means. Less than five years ago, when Weston went to England, there was probably not a man in the country who could or to burn it in riot, unless they are eduscenes of trial, in the shape of superfiuous fat, and the object of training is to
get rid of this superfluous fat and convert it into muscle. Then the muscles
must be educated and developed, and
made strong. The presence of too much
fat impedes respiration, and this is fatal
to endurance. The lungs must have
slenty of room to expand, and the heart plenty of room to expand, and the heart must also have space to beat in order to business—lose their terror after a paper ensure a free and healthy circulation of ensure a free and healthy circulation of the blood. Rowell came here thoroughly trained, and with muscles as hard as steel, and although the smallest man of the four, he was the strongest. What he lost in length of step he made up in rapidity of motion, by his continual jog-trot. The advantage of his skill as a runner was largely enhanced by the fact that by running he developed and exercised the larger muscles of the thighs, cised the larger muscles of the thighs, and by walking, the muscles of the lower extremeties, so that both were of use to him in the contest; and when he isfied with it on account of something walked the large muscles were resting, just as the smaller ones were when he may stop taking it; but the absence of the familiar sheet at their homes and walking could compete, in a long contest, with a skillful runner, and no doubt of the first two days. Harriman had a long stride, but it was too much of a strain on the muscles of the lower limbs, at a long stride, but it was too much of a strain on the muscles of the lower limbs, at a long stride, but it was too much of a strain on the muscles of the lower limbs, at long stride, but it was too much of a long

and they finally gave out. Not only was Rowell an educated pedestrian, but he was free from dissipation. When O'Leary competed for the belt he used up his strength, which was further drawn upon by his subsequent walks with Hughes and Campana. Not only did he fail to take proper time to recuperate, but, as the lecturer was informed, he indulged extensively in the use of ardent spirits. Dr. Ranney then dwelt at length upon the evil effects of alcohol upon the sys-tem, which he described as terrible, and passed to the discussion of the brain and neryous system. The brain, he said, was the centre of the nervous system, and was as much subject to change from the effects of study and thought as the nuscles were from use and training.

The Domestication of the Buffalo. Col. Ezra Miller, of Mahwah, N.J. that it will pay to breed buffaloes, both pure blood and crossed with our domestic cattle. Relating his experience with these animals lately, the colonel said: "I have proved to my own satisfaction one half as much to keep a buffalo as to keep an ordinary cow. Third, they can be fattened as quickly as ordinary beeves, and on half the food, and their beeves, and on half the food, and their same cause—oxidation of carbon, not of fifth, they are as good butter makers.

The milk of the buffalo is a little yellower than that of the Alderney, but tasting decaying a poetical fervor by very sweet and rich, and there is more cream than in the Alderney milk. As to the quantity of milk given by buffalo cows, they will average with the average milker. The udder of the buffalo cow is very small indeed, but the number of the buffalo cow is very small indeed, but the number of the buffalo cow is very small indeed, but the number of the buffalo cow is very small indeed, but the number of the buffalo cow is very small indeed, but the number of the nu cow is very small indeed, but the milk veins are immense. This is a provision whereby nature enables them to run faster than it cumbered by a large udder. am of the opinion that the most desirable cross is with the big Dutch cattle that have such big udders. I think that crossing them with our short-horns will give remarkably good beef. But the beef from our buffaloes more than met my expectations. It was sweet and farmer; juicy and tender, not at all like the meat of the buffalo of the plains.

the buffalo and the ordinary cow, I find and guano will be of little use. these facts: The buffalo can be kept at In good fences, good far these facts: The buffalo can be kept at In good fences, good farmhouses, one half the cost of the cow: that's one good orcharJs, and children enough to point for the buffalo. We will assume, gather the fruit; to give the cow a fair show, that she In a clean kitch yields more milk and butter. That bal a clean cupboard, a clean dairy, and a ances the account so far. The buffalo clean conscience; is fully equal to our stock in the quality of meat. So they are still on even stooping, but may be of much benefit; terms; but its hide is worth four times That to keep a place and everything men. It was better than a \$25 robe I bought to compare with it. The fur was longer and finer, the result of good

the past week one of the most exeiting cate of Republican institutions will be events witnessed in New York city for a long time. The excitement was not confined, to that city, but extended to all parts of the country, and to other countries as well. We may well ask the rich, but defend rather the interests of propagate by defending to the defending to the contribution.

walking could compete, in a long contest, offices for a few weeks becomes an in-

Fish as Brain Food.

Since during the acts of sensation and intellection phosphorus is consumed in the brain and nervous system, arises a necessity to restore the portions so consumed, or as the popular expression is, to use brain food. Now, as every one knows, it is the property of phosphorus to shine in the dark; and as fish in a certain stage of putrefactive decay often emit light, or become phosphorescent, is the property that is due to the property of the sense property of phosphorus to shine in the dark; and as fish in a certain stage of putrefactive decay often emit light, or become phosphorescent, is the property that is due to the property of the sense property of phosphorus to shine in the dark; and as fish in a certain stage of putrefactive decay often emit light, or become phosphorescent, is the property of the property of phosphorus the property of phosphorus to shine in the dark; and as fish in a certain stage of putrefactive decay often emit light, or become phosphorescent, is due to the property of phosphorus the property of phosphorus to shine in the dark; and as fish in a certain stage of putrefactive decay often emit light, or become phosphorescent, is due to the property of phosphorus the property of phosphorus to shine in the dark; and as fish in a certain stage of putrefactive decay often emit light, or become phosphorescent, and property the property of phosphorus the property of the property Since during the acts of sensation and emit light, or become phosphorescent, along the KANSAS PACIFIC RAILWA's it has been thought that is due to the T. F. OAKES, Gen'l Superintendent abundance of phosphorus their flesh contains, and hence that they are eminently suitable for the nourishment of has been making some experiments which have led him to the conclusion able brain food. Under that idea many themselves that they derive advantage from it in an increased vividness of thought, a signal improvement in the reasoning powers. But the flesh of fish several points. First, that buffaloes can be tamed. Second, that it doesn't cost be tamed. Second, that it doesn't cost Decaying willow wood shines even more meat is just as good. Fourth, they are as good milkers as our Alderneys; and their phosphorus, in organic substances con-
